Parts	Deton	Other factories in China
core	 High class cold-rolled silicon steel sheet, energy loss is smaller, less than 50K temperature rise.	Normal iron steel sheet, energy loss is bigger, temperature rise is higher.
winding	 100% enameled copper wire, cooper wire grade is higher and buying from big company GREE, with higher insulation class.	Lower class copper wire, copper mix aluminum wire or only aluminum wire, these wire will shorten motor using life.
Oscillation overload protection	 Strong oscillating overload protection ability to protect the motor from burning.	No overload protection to protect the motor from burning.
Gear box	 Gears are made of durable aluminum alloy, and made by high precision machining with low running noise. It has overload protection inside to protect the fan motor from burning when being external blocked during oscillation. We are the first factory to make regulations to inspect the hardness of the gears. Our buying price is 40% higher than normal ones in the market.	Gears are made of iron, easy to rust and not last long. Poor precision machining causes higher noise during running. Do not have inspection regulations and quality control. Price is cheaper than us.
Bearing	 Ball bearing, performance is steady, can run 5000 hours continuously. The bearing bought from RENBEN, the biggest bearing factory in China. Price is 40% higher than others.	Oil bearing, can not continuously work for a long time for the oil is easy to dry. Or ball bearing bought from small factory with poor quality control and 40% cheaper in price.
Thermal protector	 Re-settable thermal protector, the fan will stop running to protect the motor from burning when the motor is too hot, and can be used again by restart after cooling down.	No thermal protector or one time thermal fuse, motor is very easy to burn down.
Blade	Die-casting aluminum blade, low noise, weight is 50%-70% heavier than other factories.	Die-casting aluminum blade, weight is 50%-70% lighter than ours.
Grill	Stronger grill with $\Phi 2.2\text{mm}$ diameter of net line.	Weaker grill with $\Phi 1.8\text{-}2\text{mm}$ diameter of net line.
Performance	Air volume is 1.5 to 2 times higher than similar products in the market.	Less air flow.
